

# Press Release

## **WeGrow continues its IR video call format due to strong demand – two sessions on April 20 and 23**

Tönisvorst, Germany, March 31, 2026 – Following the very positive response to the recent IR video call, WeGrow AG will continue this communication format and is offering two additional sessions in April: a German-language video call on Monday, April 20, 2026 at 5:00 p.m., and an international English-language video call on Thursday, April 23, 2026 at 5:00 p.m.

With these additional sessions, WeGrow AG is responding to the strong interest from investors, analysts, media representatives, business partners, and other market participants both domestically and internationally. The aim is to make the company's strategic and operational development accessible to an even broader audience and to further expand direct dialogue.

During the IR video calls, founders and Management Board members Allin Gasparian and Peter Diessenbacher provide insights into the international growth trajectory of the WeGrow Group. The focus is on the development of the scalable business model based on genetics, industrial plant propagation, cultivation systems, and wood-based applications, as well as international expansion through distribution, licensing, and royalty models. The further development of KiriBloX®, a modular, reusable timber construction system made from just three-year-old hybrid kiri trees, is also highlighted as an additional growth pillar.

Interested participants are kindly requested to register in advance via the links below. Following the presentation, there will be an opportunity to ask questions directly to the Management Board.

Dates and registration:

**German-language IR video call**  
**Monday, April 20, 2026, 5:00 p.m.**

## **About WeGrow AG**

WeGrow AG was founded in 2009 as a spin-off from the University of Bonn and specializes in fast-growing hybrid kiri trees. The company develops integrated system solutions along the entire value chain – from breeding and genetics through industrial plant propagation and cultivation systems to wood-based, circular applications. Based on many years of operational validation, WeGrow positions itself as an international system provider with a scalable growth model.
